

# Statistics Lab, Homework 0

Math 2820L: Spring 2018: Jon Ashbrock

January 10, 2018

**Project Description** You are investing money into a fund and would like to know how much money you'll have after a certain number of years. On January 2nd, 2000, you invest 10,000 into this fund. Each year on January 1st you receive 7.5% interest on the amount currently in a fund. On January 2nd of each year you add another 2,000 to the fund. How much money will you have when you take the money out of the fund on February 1st, 2030? Your code should contain comments that explain what you're doing.

**Hint:** Use a for-loop.
